Mixol

Mixol, a high-quality tinting paste made in Germany, is highly concentrated and will add color to almost any type of paint or coating material.

A binder-free, glycol-based product, Mixol is made for hand mixing and is easily suspended in water, oil or solvent bases. It is perfect for oil-based or latex paint, lacquers, shellacs, Venetian plaster, concrete floor paints, cement, wood putty and wood fillers. Mixol can be used to color radiator paints, epoxy resin paints, polyurethane paints, chlorinated rubber paints and other specialty paints.

Colors are so concentrated that Mixol is usually measured by drops, not ounces. The product is very popular with faux finishers as well as with residential painters who want to color-correct a batch of paint. "Painters love the ease of mixing," says JoAnne Campisi of Sepp Leaf Products, Mixol's U.S. distributor. "With its minute particle size, it's easily suspended."

Mixol is highly resistant to frost and heat damage. Its shelf life is infinite because there is no binder to dry out or thicken. Temporary thickening due to cold weather doesn't affect its quality.

All you have to do is warm it to room temperature, shake it up, and it's ready to use.

Mixol also has a newly expanded line of oxide tints — made with inorganic minerals — that are used with silicate paints and coatings, silicone resin paints

and coatings, and varnishes that are low in or free from aromatic compounds. These oxide tints, which come in 15 colors, are perfect for outdoor applications because they are completely colorfast.

The complete Mixol line is made up of 32 colors. The product is more expensive than other tints you'll find on the market, but due to its high concen-

tration of color, you'll need much less Mixol colorant than any other universal tint. "People are amazed at how little is needed," Campisi says.
